Feedback

## CONFIDENTIAL

The catastrophe serial number should be assigned to insured losses resulting from the described occurrence.

Catastrophe serial numbers are assigned when the insured loss to the industry resulting from an occurrence is expected to be at least \$25 million to property insured under fire and allied lines coverages, inland marine fixed property coverages, and comprehensive automobile coverages. The occurrence must also result in a significant number of individual claims. Serial numbers may also be assigned to Extreme Loss Events that result in significant Worker Compensation Losses.

PCS makes every effort to identify individual storm systems; however, it is left to the judgment of the individual company whether occurrences are attributable to a single meteorological disturbance.
